

When one line stops, CableTwin shows the recovery routes before production changes.

One disruption. Three verified routes. One accountable human decision.

JOBS IN THE SEGMENT

A stoppage does not stop only one machine; it invalidates today's delivery commitments.

The pain is real as a process; frequency and loss remain plant-specific pilot questions.

One line stops. Three verified routes. One human decides.

The learned advisor ranks existing routes; it never creates or edits one.

In 30 seconds, the twin reaches an auditable choice.

LIVE DEMO

- 1 Trigger Line 2 stop
- 2 See three routes + local ML suggestion
- 3 Manager overrides to Service

17,856 **10,440**
candidates feasible

Monetization follows evidence, not promises.

Pricing, conversion and ROI are pilot questions. No customer, revenue or savings are claimed today.

Start read-only in one workshop; earn the right to integrate.

4-6 WEEKS

One bounded shadow pilot

Pilot gates to agree

faster assessment · lower delay · 0 constraint violations · planner usability · 100% traceability

Targets to agree - not achieved claims

Enterprise APS proves the category; CableTwin lowers the first step.

Manual / spreadsheet

Immediate and familiar

Hard to compare constraints, alternatives and audit consistently

ERP · MES · APS · virtual twin

Broad, mature and integration-ready

A larger deployment and data foundation than our first adoption wedge

CableTwin

One disruption · three verified routes

Local read-only shadow mode; integrate where useful - step aside where existing APS already solves it

Differentiation = deterministic planner + advisory ML + separate bounded verifier + explicit human authority

One accountable builder delivered the full loop.

The next team extension is not a fictional org chart.

It is one real plant design partner and its production planner.

No fantasy forecast: the first commercial numbers must be earned.

ROI CLAIMS

This is a strength, not a gap we hide.

Synthetic product evidence is not customer evidence.

PROVED NOW

Public working product

9/9 planner + 5/5 ML checks

17,856-candidate bounded verification

EARNs REVENUE NEXT

One design partner

One paid-pilot hypothesis

Price and scale validated after measured value

Commercial discipline: prove value first; price second; scale third.

Built now. Validate next. Scale only after proof.

NOW

Working public prototype

Decision twin · local ML guidance · bounded verifier · human approval

NEXT

One 4-6-week shadow pilot

Read-only data · 5-10 incidents · planner-validated constraints

THEN

Integrate only if KPIs pass

Configuration · site deployment · subscription hypothesis

Select CableTwin for the Grand Finale - and connect one Tunisian plant design partner.
