At 10:00, Line 2 stops for four hours.

Without action, the factory accumulates 620 minutes of delay.

SIMULATED INCIDENT

10 h 20

TOTAL DELAY

3

ORDERS EXPOSED

7 / 10

ON TIME

The twin does not guess.

It replays constraints, evaluates schedules and exposes the trade-off before any decision.

A living decision twin—not a decorative 3D model.

Telemetry, orders, constraints and consequences stay in one operational picture.

01 AMBIENT SIGNALS

Power, vibration, pressure and temperature make the event legible.

02 PRODUCTION CONTEXT

Three lines and ten synthetic orders remain visible while the clock advances.

03 DECISION BOUNDARY

Every value comes from the planner; nothing is sent to a machine.

The model suggests. The manager decides.

CableTwin separates recommendation from authority—and preserves both traces.

MODEL SUGGESTS

HUMAN CHOOSES

COST · ≈79% CONFIDENCE

SERVICE · MANAGER OVERRIDE

687 synthetic incidents generated by the twin itself · 16 explainable features · 93.6% held-out synthetic test accuracy

A human choice becomes an auditable recovery plan.

The selected route is approved once—and recorded without rewriting the recommendation.

APPROVED · 10:07

Human authority

The production manager confirms the selected strategy.

Decision trace

Model suggestion retained
Human selection retained
Approval time retained

No machine control

Read-only decision support.

Three intelligence layers. One accountable decision.

Each layer has a bounded job—and the human remains the authority.

SHARED SAFETY SURFACE

Validation and KPI functions are shared; planner construction and bounded enumeration stay separate.

There is no fake “best” plan—only an explicit trade-off.

All three displayed policies are unique optima for the fixed synthetic scenario.

The demo manager selects SERVICE

Evidence first. A real-site learning loop only after permission.

The prototype is complete today; the pilot remains deliberately read-only.

Reproduce in three commands

```
npm run check  
npm run check:recommender  
npm run benchmark:exact
```

4-6 WEEK SHADOW PILOT

01 READ-ONLY

Connect historical exports; no machine control.

02 SITE-HOSTED

Data and inference remain on the plant site.

03 GATED LEARNING

Retrain only after sufficient real incident history.

04 SEPARATE HOLDOUT

Promote only after an agreed validation threshold.

LIVE NOW

See tomorrow before deciding today.

A living factory twin that turns disruption into verified options—and keeps the human in command.

hackaton-automate-or-die.vercel.app/#twin
90-second live decision journey

THE ASK

Select CableTwin for the final pitch.

Then let us run a read-only shadow pilot with one planning team.

HUMAN-IN-COMMAND
