

TEAM SUPCOM / SOLO PARTICIPANT

Oussama Akir

One accountable builder. One complete decision system.

Product strategy / constraint engineering / local ML / isometric twin /
verification / narrative / delivery

CABLETWIN

The Waze of the cable factory

Live / hackaton-automate-or-die.vercel.app/#twin

Solo does not mean one discipline.

01 PRODUCT

Focused the solution on the urgent operational decision after an unplanned line stoppage.

02 CONSTRAINT ENGINEERING

Encoded feasibility, policy trade-offs and the deterministic Service, Cost and Stability routes.

03 AI / ML

Built a separate local learned route recommender with explainable features and a strict no-schedule-change boundary.

04 PRODUCT EXPERIENCE

Built the live decision interface and the state-reactive isometric workshop twin.

05 VALIDATION

Separated 9/9 planner checks, 5/5 recommender checks and the bounded exact verifier.

06 NARRATIVE + DELIVERY

Converted the system into a reproducible demo, documentation, pitch and public product.

Operating principle: make every technical claim inspectable, keep every business claim bounded, and leave the final production decision with the human manager.

From focused concept to a public, evidence-backed product.

PHASE 1

Focus the decision

One fictional workshop, one L2 stoppage, three recovery routes, one human authority.

ACCEPTED PHASE 2

Make it reproducible

Working journey, 9/9 planner checks, exact bounded evidence and complete jury package.

DAY 2

Make intelligence visible

Live isometric twin plus separate local learned guidance trained on twin-generated incidents.

9 / 9

deterministic planner + workflow

5 / 5

separate local recommender

17,856

bounded candidates evaluated

PUBLIC

working twin at the live URL

THE NEXT TEAM EXTENSION IS REAL, NOT A FICTIONAL ORG CHART

One industrial design partner + planner-led read-only shadow pilot. No machine control, external AI API, real factory data or signed-pilot claim in this demonstration.
